

A low-angle, black and white photograph of several tall skyscrapers reaching towards a dark, cloudy sky. The perspective creates a sense of height and scale. A white rectangular border is centered on the page, framing the title text.

# 01 Mobile Applications

## Market Trends

India is always been market of the Android OS. Majority of the population is not purchasing iOS, that is because of its price margin mainly and where in android getting things as per your need and budget is pretty easy.

# Android Applications Development

# 02

## Technology We Uses

### Prototype

Adobe Xd is a tool that we use to create the application prototype that will give you a future sight of how the app is going to work.

### Testing

For testing purpose we choose Google Android Emulator and some manual testing too.

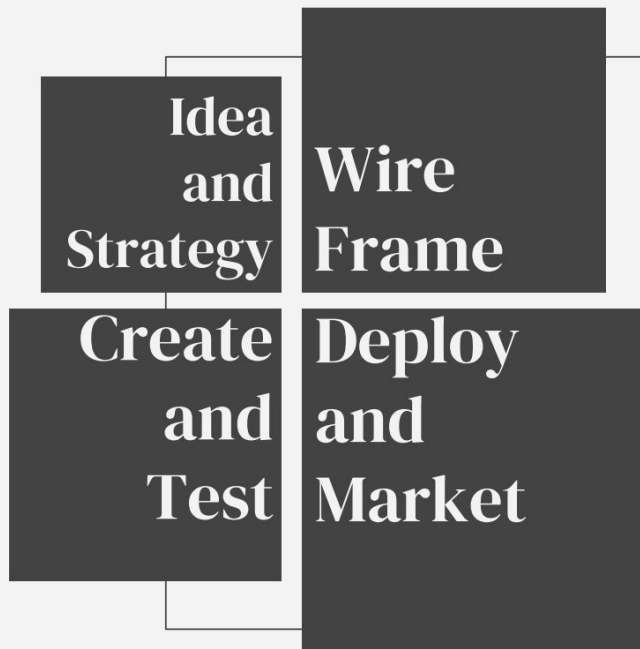

### Official Kit

We use only official tool kits for the development and designing of the application at Techradius. So we choose Android SDK tool kit over any other unofficial kits.

### Language

There are so many languages those can be used while developing the app but we love to go with the best, we here prefer Java, C++, Corona, Phonegap and HTML5.

## Process We Go Through

### **Idea and Strategy**

First we study the idea that client provide for the app to know if it can out do other app then make strategy around it.

### **Wireframe**

After having an idea of what we need to do allows us to come up with a prototype design to let you know how app will look and function.

### **Create and Test**

As design is set, we move to development with the latest solutions and test the app many time for better and right functionality.

### **Deployment and Market**

We will create your profile on Google Play Store with full rights to your app.

# 03 iOS Application Development

## **Android Application Development**

Android App Development Team of Tetradius have the experience of building on so many of apps. This experience gives them advantage from other developers, this way our team is compatible of making simple yet effective applications.

## **iOS Application Development**

We have brilliant developers who are capable of making applications perfectly oriented towards our client's need. Not just native we are capable of making hybrid application for you with ease.
